Emacs's Fuel (Factor) mode [by Eduardo Cavazos and Jose A Ortega]

In factor source files

C-cz	switch to listener
C-co	cycle between code, tests and docs factor files
M-.	edit word at point in Emacs
	(see `fuel-edit-word-method` custom var)
M-,	go back to where `M-.` was last invoked
M-TAB	complete word at point
C-cC-eu	update USING: line
C-cC-ev	edit vocabulary (`M-x fuel-edit-vocabulary`)
C-cC-ew	edit word (`M-x fuel-edit-word-at-point`)
C-cC-ed	edit word's doc (`M-x fuel-edit-word-at-point`)
C-cr, C-cC-er	eval region
C-M-r, C-cC-ee	eval region, extending it to definition boundaries
C-M-x, C-cC-ex	eval definition around point
C-ck, C-cC-ek	run file
C-cC-da	toggle autodoc mode
C-cC-dd	help for word at point
C-cC-ds	short help word at point
C-cC-de	show stack effect of current sexp (with prefix, region)
C-cC-dp	find words containing given substring (`M-x fuel-apropos`)
C-cC-dv	show words in current file (with prefix, ask for vocab)
C-cM-<, C-cC-d<	show callers of word at point
C-cM->, C-cC-d>	show callees of word at point
C-cC-xs	extract innermost sexp (up to point) as a separate word
C-cC-xr	extract region as a separate word
C-cC-xl	replace word at point by its definition
C-cC-xv	extract region as a separate vocabulary

In the listener:

TAB	complete word at point
M-.	edit word at point in Emacs
C-ca	toggle autodoc mode
C-cp	find words containing given substring (`M-x fuel-apropos`)
C-cs	toggle stack mode
C-cv	edit vocabulary
C-ch	help for word at point
C-ck	run file

In the help browser

h	help for word at point
v	help for a vocabulary
a	find words containing given substring (`M-x fuel-apropos`)
e	edit current article
ba	bookmark current page
bb	display bookmarks
bd	delete bookmark at point
n/p	next/previous page
l	previous page
SPC/S-SPC	scroll up/down
TAB/S-TAB	next/previous link
k	kill current page and go to previous or next
r	refresh page
c	clean browsing history
M-.	edit word at point in Emacs
C-cz	switch to listener
q	bury buffer

In crossref buffers

TAB/BACKTAB	navigate links
RET/mouse click	follow link
h	show help for word at point
q	bury buffer

In the debugger (it pops up upon eval/compilation errors)

g	go to error
<digit>	invoke nth restart
w/e/l	invoke :warnings, :errors, :linkage
q	bury buffer

Miscellaneous

C-hm	Give a summary of available commands
M-x run-factor	start the listener
M-x fuel-scaffold-vocab	create a new vocabulary directory and associated files
M-x fuel-scaffold-help	when in a vocab file, to create a docs file with boilerplate for each word
